DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
2. Claims 1 – 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. Claim 1 refers to the “relevant layer”. What is the relevant layer? The claim also refers to motion energy. Does this mean kinetic energy? The claim refers a “rest layer”. What is a rest layer? Correction or explanation is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 5 – 7 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Gallagher et al.
6. With respect to claims 5 and 6, Gallagher et al. show (see cover Figure and column 3, line 55 et seq.) and MTJ structure with soft and pinning layers and a tunnel oxide where the stack is etched down to the tunnel layer. Note that the processing limitations carry no weight in claims drawn to a structure. Note the flux guide function is inherent in the soft layer.

Art Unit: 2814

7. With respect to claims 7 and 9, Gallagher et al. show the device is usable as either as a field sensor or as a memory cell (column 2, line 51).

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gallagher et al. in view of Ruigrok et al.
10. Gallagher et al. show the field sensor application but provide no details of the structure. Ruigrok et al. show that for a field sensor a yoke is required to couple the device to the field. It would have been obvious to include the yoke shown by Ruigrok et al. in the Gallagher et al. device to provide functionality.
